

## ABSTRACT

Furniture connectors and modular furniture systems are disclosed. The furniture connectors can be configured to include furniture-engaging portions of the  
5 connectors that are inserted into grooves that extend along edges of furniture members. The connectors can include at least two furniture-engaging portions that may be fastened to multiple furniture members to connect furniture members together in a secure manner in a variety of assembly configurations. The modular furniture systems disclosed may use easy-to-assemble connectors and reversible connections  
10 that may permit disassembly and reassembly, optionally, into a different furniture configuration than the one disassembled.
